

Name (last, first):

CS 300 Client Side Web Development  
Progress Check Week 12 (10 pts.)

Using Notepad or Notepad++, build a form in an html file with the following information included.

Leave the post URL destination blank.

Turn in your .html source code file, and a screen shot of your published (uploaded on server and validated) (2 pts.) finished work, along with this cover sheet.

1. Create a form named: **Personal Computer Use Survey** (.5 pt.)
2. Include **fields** for the user to enter their **first name**, and their **last name**. (1 pt.)
3. Ask the user if they have ever taken an online survey before (use the **appropriate button type for accepting only one answer**, either yes or no). (1pt.)
4. Ask the user to choose their age range from a series of **check boxes**. (10-20, 21-30, 31-40, 41-50, 51-60, over 60). (1 pt.)
5. Ask the user to **select** all the uses they have for computers, **categorizing the list provided by commerce, entertainment, or other** (This is the list you will need to categorize: **bill paying, MMORPG, banking, shopping, looking up information, watching youtube, reading the news, downloading music, blogging.**) (2 pts.)
6. Give them an **area** large enough to write more personal comments about their computer use. (1 pt.)
7. Make sure they can **submit** and **reset** the form. (.5 pt.)
8. Make sure your form is "**user friendly**," and **readable**.  
( i.e use fieldsets and legends to categorize form input as personal information, survey questions, Additional Comments About Your Computer Use, and Submit your information or clear the form) (1 pt.)
